PROFESSIONAL DIVERS-OUT.

Horace Porter, who is a slender well-proportioned man, forty-eight or so, with a gray mustache and imperial, and who is probably, after Chauncey Depew, the best known after-dinner speaker in this country, explained to a Brooklyn Eagle writer the other day how he was able to keep up the public banquet racket as he does. Said he: "If a man ate all the courses that were set before him, he would be a digestive wreck in six months. No man can stand the endless entrees, particularly if he is to say anything when the feeding is over. And he is wise if he refrains from looking upon the wine-cup when it is red and saves himself for the champagne. Any constitution, even the strongest, is soon undermined by those heavy feeds, and I learned long ago to pick out a dish or two on menu and stick to those, eating heartily of those and leaving the others alone. If the soup be of a simple sort I eat it all, but turtle soup, mulligatawny, and the like I let severely alone. Then I get a good bit of roast somewhere along the list: a vegetable, a salad, with a bit of cheese and a cup of coffee, make my meal; and I am ready for speechmaking after, with a light heart and stomach and a clear head. I drink a little sherry sometimes with soup, but champagne is my dinner tipple, as I find it always stimulates instead of clouding the brain. Depew follows my tactics, too, I think. He always gets a good bite of the ham and is fond of chicken in any form; but he eschews the entrees and all their works, and never drinks more than two wines. If we hadn't got down to some such system long ago we would never have been able to live up to the necessities of the situation. I've seen diners come and go. They eat heartily of everything, drink all the wines, keep their wits at the topmost stretch for three or four hours. That goes on for a few years, and either they begin to get dull and cloudy, to tell old stories and tell them over and over, to take offence easily and be quarrelsome, and so get left out when lists of invitations are being made up, or else they screw themselves up to the point with brandy drunk before dinner, and directly you hear of their being whirled off somewhere for complete rest, victims to nervous prostration and paralysis, or down they go with a crash—apoplexy, heart disease, or something of the kind. In reality they have been burning their candle at both ends, making the brains and the stomach do their utmost at the same time. Moderation is a virtue which the professional dinner-out must learn early in life, or things are going to be unpleasant for him before he is through."

Careful search was made, magnetized rods were sunk to a depth of sixty-five feet, but no engine could be found. It had sunk beyond human ken, and from that day to this has never been discovered. Cattle and horses are frequently lost, the only animal that is safe being a mule, the only animal that never gets caught. No greater instance of the intelligence of this much maligned quadruped can be cited than the skill and care with which it avoids all unsound bottoms.

As its hoofs are much smaller and narrower than those of a horse could safely pass. Recognizing this fact, whenever a mule feels the ground giving away under its feet it draws back instantly, and cannot be induced to advance a step, although a whole drove of horses may have immediately preceded. Those who think that a mule is stupid are very much mistaken.—(St. Louis Post-Dispatch.)

TRACHEROUS QUICKSANDS.

A Locomotive Quickly Swallowed Up  
And All Trace of It Lost.

"In the construction of the Kansas Pacific and Atchinson, Topeka and Santa Fe Railroads," said H. L. Carter, a railroad contractor of St. Joseph, to-day, "one difficulty of frequent occurrence was met with, which, as far as my experience goes is unique in railroad history. From Western Kansas to the mountains quicksands are to be found in nearly every stream, no matter how small, and to successfully bridge them required an expenditure out of all proportion to the size of the stream to be crossed. We tried pile-driving, but the longest pile disappeared without touching bottom. Then filling with earth and stone was attempted and met with poor success, as the quicksands were apparently capable of swallowing the entire Rocky Mountains. The only means of crossing a quicksand was found to be to build short truss bridges across them. This was very expensive, but was the only thing to be done.

As an instance of the practically bottomless nature of the quicksands, I may cite the case of an engine that ran off the track at River Bend, about ninety miles east of Denver, on the Kansas Pacific. The engine, a large freight, fell into a quicksand, and in twenty minutes had entirely disappeared. Within two days the company sent out a gang of men and a wrecking train to raise the engine. To their surprise they could not find any trace of it.

Careful search was made, magnetized rods were sunk to a depth of sixty-five feet, but no engine could be found. It had sunk beyond human ken, and from that day to this has never been discovered. Cattle and horses are frequently lost, the only animal that is safe being a mule, the only animal that never gets caught. No greater instance of the intelligence of this much maligned quadruped can be cited than the skill and care with which it avoids all unsound bottoms.

The sure preventive for cholera is cleanliness.

Bathrooms should not open into sleeping apartments.

Antique oak or cherry is the favorite wood for bedroom set.

Pine pillows are used on library lounges as inciting slumber.

Keep a separate saucepan for boiling potatoes in if possible.

The oftener flour is sifted for sponge cake, the lighter the cake will be.

The water which codfish has been soaked in is very good for washing the zinc under the stove.

Bathroom accessories may be simple or elegant, but plenty of water and soap are within reach of all.

Take a bucket of fresh water into your bedroom every night and let it remain uncovered. It will absorb all poisonous gases.

Every one should have eight hours' sleep, and pale, thin, nervous persons require ten, which should be taken regularly, in a well-ventilated room.

Paint stains that are dry and old may be removed from cotton or woolen goods with chloroform. First cover the spot with olive oil or butter.

To cure warts take an Irish potato, cut a piece off the end and rub on the wart two or three times a day, cutting a slice from the potato each time used. Very often one potato is sufficient for the cure.

A foreign medical magazine says that dime thymophylloxypragol is useful in the treatment of rheumatism. The sufferer can attach a handle to the word and saw off the afflicted member with it.

Application for a Patent

No. 681.

NOTICE IS HEREBY GIVEN THAT A. MAHON and J. L. ROUTZONG, whose postoffice address is Bullionville, Lincoln County, Nevada, has this day filed their application for a patent for fifteen hundred linear feet of the "Magnolia" mine or vein bearing silver, with surface ground six hundred feet in width, situated in Highland Mining District, County of Lincoln and State of Nevada, and designated by the field notes and official plat on file in this office as lot No. 37, located on unurveyed lands. The exterior boundaries of said lot No. 37 being as follows, to-wit:

Beginning at a post marked No. 1, U. S. survey No. 27, whence the Mendota brick smelter, marked U. S. mineral monument No. 1, bears S 64 deg E 3425 feet. This smelter is about 15 feet high and 8 feet square at its base. The main shaft in this claim bears N 82 deg W 591 feet. The notice monument stands 2 feet north of the center of the shaft, thence running, lat course, a 77 deg W 1000 feet, to a post marked No. 2, U. S. survey No. 27; thence, S 31 course, N 10 deg W 630 feet, to a post marked No. 3, U. S. survey No. 27; thence, S 30 course, N 77 deg E 1500 feet, to post marked No. 4, U. S. survey No. 27, and thence, S 15 course, N 13 deg E 900 feet, to post No. 5, the place of beginning, containing 30-100 acres. Posts Nos. 1 and 5 stand in the original location monuments. Posts Nos. 2 and 3 stand about 40 feet easterly of the original location monuments. Magnetic variation, 15 degrees east.

The location of this mine is recorded in the Recorder's Office of Lincoln County, Nevada, in book of mining notices. This claim is bounded on the east and west by extensions of this ledge—names unknown—and on the north and south by no known claims. Any and all persons claiming adverse title to said Magnolia mine or surface ground are required to file their adverse claims with the Register of the United States Land Office at Elko, in the State of Nevada, during the sixty days period of publication hereof, or they will be barred by virtue of the provisions of the statute.
